

## CURRENT PROBE & POWER SUPPLY

GCP-530/1030

GCP-206P/425P

### 50MHz and 100MHz AC/DC Current Measurement

For easily observing current waveforms under a wide bandwidth and with high sensitivity, the GCP-530 and GCP-1030 clamp on current probes only need to be connected to the BNC input of a data logger or oscilloscope and clamped onto a conductor to start measurement.

### Multiple Applications for AC and DC Measurements

Using the combination of a Hall-effect sensor and an AC current transformer, the probes provide accurate measurement of DC or AC currents up to 30Arms or DC100 MHz (for model GCP-1030). The split core construction allows the probe to easily clip on to a conductor without breaking the conductor.

### Wide Range of Applications

With a flat frequency response, low noise and low insertion loss, the GCP-530 and GCP-1030 clamp-on probes are ideal for measuring steady state or transient current in amplifiers, inverters, electric motors, switching power supplies, controllers, sensors, LCD displays and electronic ballasts. For low current measurements, the high signal-to-noise ratio also makes the GCP-530 and GCP-1030 current probes ideal solutions.

### High Accuracy Current Measurement

The demagnetize switch demagnetizes the core to remove any residual magnetism that has developed from excessive input current or from external magnetic fields. The zero adjustment control allows temperature drift and DC voltage offset to be easily compensated.

## GCP-530/1030 GCP-206P/425P

### FEATURES

- Bandwidths : DC~50 MHz and 100 MHz
- High S/N Ratio : Ideal for Measuring mA Signals (GCP-530)
- High Bandwidth, From DC ~ 100 MHz (GCP-1030)
- DC and AC Measurements
- Better than 1% Accuracy
- Direct Connection to High-impedance 1 MΩ BNC Oscilloscope Inputs
- Demagnetize Switch : Demagnetizes the Core to Remove any Residual Magnetism
- Simple Overload Protector Prevents Damage Due to Overheating
- 2 Channel or 4 Channel Current Probe Power Supplies Designed for the GCP-530 and GCP-1030 Clamp Probes, The Power Supplies are Ideal for When Power is not Available From an Oscilloscope or for General Current Measurement Applications

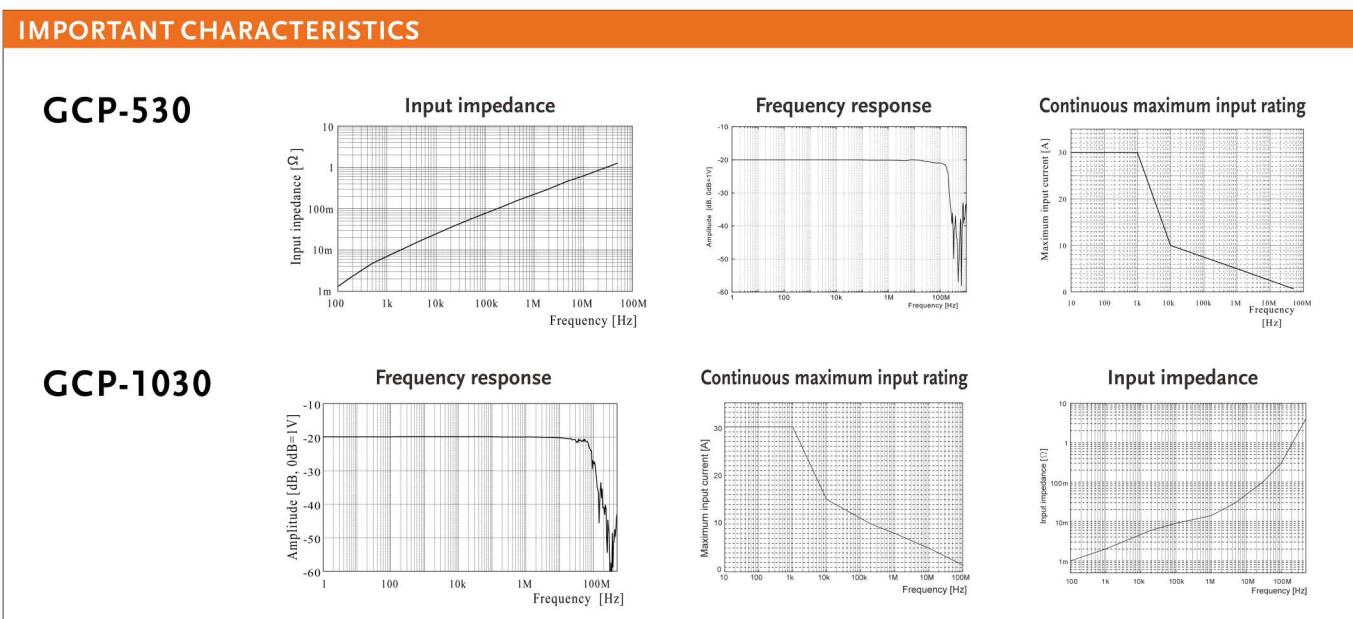

### APPLICATIONS

- Power Supply Design
- Power Device Evaluation
- Power Converter Design
